

Mission Control™

Blood Gas and Electrolyte Control - Level 1

REF	DD-92001D	CE	IVD	2028/07	LOT	2508144		
Enlilsh Intended Use: MISSION CONTROL™ Blood Gas and Electrolyte Control is an assayed quality control material intended for monitoring the measurements of pH, pCO₂, pO₂ in blood gas analyzers and sodium, potassium, chloride, lithium, ionized calcium and total carbon dioxide in ISE electrolyte analyzers.	DEUTSCH Vorgesehener Gebrauch: MISSION CONTROL™ Blutgas-und Elektrolyt-Kontrolle ist eine Qualitätskontrolleprüfung, die zur Überwachung der Messungen des pH-Wertes pCO₂, pO₂ in Blutgasanalysatoren und Natrium, Kalium, Chlorid, Lithium, ionisiertes Calcium und Total-Kohlendioxid in ISE-Elektrolyt-Analysatoren dient.	FRANCAIS Utilisation prévue : MISSION CONTROL™ Contrôle de gaz et d'électrolyte de sang en matériel approuvé pour analyse de contrôle de qualité destiné à surveiller les mesures de pH, pCO₂, pO₂ en analyseurs et sodium de gaz de sang, potassium, chlorure, lithium, calcium ionisé et anhydride carbonique total dans des analyseurs d'électrolyte d'ISE.	ESPAÑOL Uso: MISSION CONTROL™ para Gases Arteriales y Electroólitos es un material aprobado para el control de calidad en el monitoreo de mediciones de pH, pCO₂, PO₂ en analizadores de gases arteriales y de sodio, potasio, cloro, litio, calcio ionizado y dióxido de carbono en analizadores de electrolitos.	PORTUGUÊS Uso pretendido: MISSION CONTROL™ Controle de gases sanguíneos e eletrólitos é um material ensaiado, que estabelece parâmetros para controle de qualidade de análises, usado para monitorar as medições de pH, pCO₂ e pO₂, em analisadores de gases sanguíneos, e sódio, potássio, cloro, lítio, cálcio ionizado e dióxido de carbono total, em analisadores de eletrólitos ISE.	CHINESE 用途 MISSION CONTROL™ 血气和电解质质控是用于监测血气分析仪器测定的pH、pCO₂、pO₂以及电解质分析仪器测定的钠、钾、钙、锂、离子钙和总二氧化碳结合力分析质控物质。	Россий Способ применения: MISSION CONTROL™ Анализ газов крови и электролитов - это проверенный контроль качества материала, применяемый для мониторинга измерения pH, pCO₂, pO₂ в аппарате для анализа газа крови, а также натрия, калия, хлорида, лития, ионизированного кальция и всего углекислого газа в электролитных анализаторах ISE.		
Product Description: This control material is provided for monitoring analyzer performance. It is packaged in sealed glass ampules, each containing approximately 1.8 ml of solution. Ampules are packaged 10 per tray with each box containing 3 trays, for a total of 30 ampules per box.	Produktbeschreibung: Diese Kontrolle dient für die Überwachung der Analytikerleistung. Es ist in verschlossenen Glasampullen verpackt mit jeweils etwa 1.8 ml Lösung. Ein Karton beinhaltet 3 Fächer mit jeweils 10 Ampullen. Es sind insgesamt 30 Ampullen pro Karton.	Description de produit : Ce matériel de contrôle est donné pour surveiller l'exécution d'analyseur. Il est emballé dans des ampoules de verre scellées, chaque contenant approximativement 1.8 ml de solution. Les ampoules sont emballées par 10 par plateau avec chaque boîte contenant 3 plateaux.	Descripción del Producto: Este material de control es suministrado para monitorear el funcionamiento del analizador. El paquete sellado contiene ampollitas de vidrio, cada una con aproximadamente 1.8 ml de solución. Las ampollitas están empaquetadas de a 10 unidades por bandeja y cada caja contiene 3 bandejas, totalizando 30 ampollitas por caja.	Descrição de produto: Este controle é fornecido para monitoramento de desempenho de analisadores. É enviado em ampolas de vidro seladas, cada uma contendo aproximadamente 1.8 ml de solução. As ampolas são dispostas em bandejas com 10 cada, embaladas em caixas com 3 bandejas, totalizando 30 ampolas por caixa.	产品介绍 本质控物质用于监测仪器的性能表现。它是密封在玻璃安瓿瓶里，每瓶的溶液为毫升的溶液。每板由10个安瓿瓶，每盒3板共30个安瓿瓶。	Описание продукта: Этот контрольный материал применяется для мониторинга анализируемых характеристик. Он упаковывается в запаянные стеклянные ампулы, каждая из которых содержит приблизительно 1.8 мл раствора. Ампулы упаковываются по 10 штук на лотке и по 3 лотка в коробе, значит всего по 30 штук в коробе.		
Active Ingredients: MISSION CONTROL™ is a buffered solution of electrolytes (Na⁺, K⁺, Cl⁻, Ca⁺⁺, Li⁺, HCO₃⁻/CO₃²⁻). It has been equilibrated with specific levels of CO₂, O₂, and N₂. This control contains no human-based materials.	Aktive Inhaltsstoffe: MISSION CONTROL™ ist eine gepufferte Lösung von Elektrolyten (Na⁺, K⁺, Cl⁻, Ca⁺⁺, Li⁺, HCO₃⁻/CO₃²⁻). Diese wurde mit bestimmten Ebenen von CO₂, O₂ und N₂ äquibriert. Diese Kontrolle enthält keine menschlichen Grundmaterialien.	Substances actives : MISSION CONTROL™ est une solution tampon des électrolytes (Na⁺, K⁺, Cl⁻, Ca⁺⁺, Li⁺, HCO₃⁻/CO₃²⁻). Elle a été équilibrée avec les niveaux spécifiques du CO₂, de l'O₂, et du N₂. Ce contrôle ne contient aucun matériaux human-base.	Ingredientes Activos: MISSION CONTROL™ es una solución buffer de electrolitos (Na⁺, K⁺, Cl⁻, Ca⁺⁺, Li⁺, HCO₃⁻/CO₃²⁻). Esta ha sido calibrada con niveles específicos de CO₂, O₂ y N₂. Esta solución de control no contiene ingredientes de base humana.	Ingredientes ativos: MISSION CONTROL™ é uma solução tamponada de eletrólitos (Na⁺, K⁺, Cl⁻, Ca⁺⁺, Li⁺, HCO₃⁻/CO₃²⁻), equilibrada com níveis específicos de CO₂, O₂ e N₂. Este controle não contém material de origem humana.	活性成份 MISSION CONTROL™是电解质缓冲液(Na⁺, K⁺, Cl⁻, Ca⁺⁺, Li⁺, HCO₃⁻/CO₃²⁻)，经特殊水平的CO₂、O₂和N₂平衡而成的。本质控不含有人血清成份。	Активные ингредиенты: MISSION CONTROL™ - это буферизированный раствор электролитов (Na⁺, K⁺, Cl⁻, Ca⁺⁺, Li⁺, HCO₃⁻/CO₃²⁻). Он сбалансирован на специальном уровне CO₂, O₂ и N₂. Этот анализ не содержит материалов на базе человеческого организма.		
Directions for Use Immediately introduce the liquid from the ampule to the analyzer, following the instrument manufacturer's instructions for sampling a control material. Use direct aspiration, syringe transfer, or capillary mode techniques.	Gebrauchsanweisung: Nach dem Öffnen, führen Sie sofort die Flüssigkeit aus der Ampulle in den Analysator ein und folgen Sie den Hersteller-Anweisungen für die Probenahme des Kontrollmaterials. Verlieren Sie mit direkter Einführung, Spritzentransfer oder Kapillar-Modus-Techniken.	Notices d'emploi Introduire immédiatement le liquide de l'ampoule à l'analyseur, suivez les instructions du fabricant d'instrument pour prélever un matériel de contrôle. Utilisez l'aspiration directe, le transfert de seringue, ou les techniques de mode capillaire.	Instrucción para su uso: Introducir el líquido directamente al analizador, a través de la ampolla, siguiendo las instrucciones del fabricante del instrumento para el muestreo de material de control. Utilizelo con aspiración directa, transferencia por jeringa o técnica capilar.	Instruções para uso: Introduza o líquido da ampola no analisador, imediatamente após abrir a ampola, seguindo as instruções do fabricante do equipamento, para amostra de material de controle. Utilize com aspiração direta, transferência por seringa ou técnica capilar.	使用方法 打开后应立即用于分析。按照仪器生产商要求测试质控物质。可以直接加样吸取，或用注射器转移。应用毛细管方法。	Инструкции по использованию: Сразу после открытия ампулы вводить ее содержимое в анализатор, соблюдая инструкции производителя прибора для образца контрольного материала. Использовать прямую аспирацию, шприц или капиллярный метод.		
Limitation: 1. This control is sensitive to many instrument related factors that affect analytical results. Because it is not a blood-based material, it may not detect certain malfunctions, which would affect the testing of blood. 2. This product is intended for use as a quality control material and can assist in evaluating the performance of laboratory instruments. It is not for use as a calibration standard and its use should not replace other aspects of a complete quality control program.	Begrenzung: 1. Diese Kontrolle ist auf viele instrument-bezogenen Faktoren empfindlich, die das analytische Ergebnis verfälschen kann. Da es kein echtes Blutmaterial ist, kann es daher keine Störungen, die sich in der Untersuchung von richtigem Blut zeigt, erkennen. 2. Dieses Produkt dient als Qualitätskontrolle und soll als Beweiser für die Leistung von Laborgeräten eingesetzt werden. Es ist kein Kalibrierstandard und dessen Verwendung sollte nicht an Stelle von anderen kompletten Qualitätskontrolle-Programmen Ersatz leisten.	Limitation 1. Ce contrôle est sensible à beaucoup de facteurs reliés par instrument qui affectent des résultats analytiques. Puisque ce n'est pas un matériel sang-based, il peut ne pas détecter certains défauts de fonctionnement, qui affecteraient l'essai du sang. 2. Ce produit est prévu pour l'usage comme matériel de contrôle de qualité et peut aider à évaluer l'exécution des instruments de laboratoire. Il ne sert pas car un calibre standard et son utilisation ne devraient pas remplacer d'autres aspects d'un pr	Limitaciones: 1. Este control es sensible a muchos factores relacionados al instrumento que pueden afectar los resultados analíticos. Debido a que este material no es una base sanguínea, no podrá detectar algunas anomalías que podrían afectar los resultados de pruebas de sangre. 2. La intención de este producto es que sea usado como material de control de calidad y pueda asistir en la evaluación del funcionamiento de instrumentos de laboratorio. No debe ser usado como patrón de calibración y su uso no debe substituir otros aspectos del programa de control de calidad.	Limitações: 1. Este controle é sensível a vários fatores relacionados aos equipamentos, que afetam resultados analíticos. Como não é um material de origem de sangue humano, não é capaz de detectar certas disfunções, o que afetaria o teste de sangue. 2. Este produto é para uso como controle de qualidade e pode auxiliar na avaliação do desempenho de instrumentos de laboratório. Não deve ser usado como padrão de calibração e seu uso não deve substituir outros programas completos de controle de qualidade.	局限性 本质控对影响分析结果很多仪器相关因素敏感，并不能作为校准品使用，也不能取代一个系统质控程序的其他方面。	Ограничения: 1. Этот анализ чувствителен ко многим факторам, связанным с прибором, влияющим на аналитические результаты. Поскольку этот материал не на основе крови, невозможно обнаружение точных дисфункций, которые влияют на анализ крови. 2. Этот продукт используется как контрольный материал на качество и может помочь в оценке характеристик лабораторных приборов. Он не используется для калибровки эталонов и не может заменить другой подход к выполнению контроля качества.		
Storage: Store at 18-25°C. Avoid freezing and exposure to temperatures greater than 30°C. You may also store at 4-25°C without adverse effect.	Lagerung: Bei 18-25° C aufbewahren. Vermeiden Sie Einfrierung und Aussetzung bei Temperaturen von mehr als 30 ° C. Die Lagerung bei 4-25 ° C ist ohne negative Auswirkung.	Stockage : Stock à la température 18-25°C. Évitez de geler et exposer aux températures plus hautes que 30°C. Vous pouvez également stocker 4-25°C sans effet adverse.	Almacenamiento: Almacenar entre 18-25°C. Evite su congelamiento y la exposición a altas temperaturas, mayores a 30°C. Usted puede también almacenarlo entre 4-25°C sin presentar efectos adversos.	Armazenamento: Armazenar de 18 - 25°C. Evite congelamento e exposição a temperaturas superiores a 30°C. Também pode ser armazenado de 4 - 25°C, sem efeitos adversos.	贮存 18-25摄氏度保存。避免冷冻或放置与30度以上的温度中。放置于4-25摄氏度中也不不良影响。	Хранение: Хранить при 18-25°C. Избегать замораживания и повышения температуры выше 30°C. Может быть хранен при температуре 4-25°C без появления неблагоприятного эффекта.		
Expected Ranges: The values for each control analyte on the enclosed Expected Ranges Chart are based on multiple determinations performed on randomly selected samples from each lot. The listing for each instrument represents the expected range for these ampules when tested at 23°C. (Note: pO₂ values will vary inversely by about one percent (1%) per degree C that the temperature of the ampules varies from 23°C).	Wertbereiche: Die Werte für jeden Kontrollanalyt auf der beiliegenden Wertbereichstabelle basieren auf mehreren Ermittlungen, die von zufällig ausgewählten Proben von jeder Partie stammen. Die Liste für jedes Instrument beschreibt das erwartete Resultat für die jeweilige Ampulle bei der Prüfung bei 23° C. (Hinweis: pO₂ Werte variieren umgekehrt um rund ein Prozent (1%) pro Grad C, die Temperatur der Ampulle variiert um 23°C).	Gammes prévues : Les valeurs pour chaque analyte de contrôle sur le diagramme de gammes inclus sont basées sur des déterminations multiples effectuées sur les échantillons aléatoirement choisis provenant de chaque sort. La liste pour chaque instrument représente la gamme prévue pour ces ampoules une fois examinée à 23°C. (Note : les valeurs pO₂ changeront inversement par environ un pour cent (1%) par degré C que la température des ampoules change de 23°C).	Rangos Esperados: El inserto con los valores esperados para cada parámetro se ha basado en múltiples determinaciones hechas con muestras seleccionadas aleatoriamente por cada lote. El listado para cada instrumento representa el rango esperado por prueba usando ampollitas a temperatura de 23°C. (Nota: Los valores de pO₂ pueden variar inversamente en un porcentaje (1%) por cada grado Celsius en proporción a la variación de la temperatura desde los 23°C).	Valores esperados: Os valores para controle de cada analito, na Tabela de Variação Esperada (Expected Ranges Chart) anexa, foram baseados em múltiplas determinações realizadas, em amostras selecionadas aleatoriamente de cada lote. A lista de cada instrumento representa o valor esperado para aquela ampola, testada a 23°C. (Nota: valores de pO₂ variam inversamente, aproximadamente 1%, por grau C, que a ampola varie de 23°C).	配伍范围 附在盒中每个质控物质的配伍范围表是任选一个或多个质控物质多次测量的结果。列出的每个仪器测量结果与替代表按温度在23摄氏度的测量结果（注释：pO₂值会在温度每升高23摄氏度1度时，结果以相反的方向偏离1%）。	Ожидаемые диапазоны: Величины для каждого контрольного анализа внесены в Диаграмму Ожидаемых Диапазонов, основанную на множестве определенных характеристик случайно выбранных образцов из каждой серии. Запись для каждого прибора представляет ожидаемый диапазон для ампул, тестируемых при 23°C. (Примечание: величина pO₂ будет отличаться инверсно около одного процента (1%) на каждый градус C при изменении температуры ампул от 23°C).		
The Expected Ranges are provided as a guide in evaluating analyzer performance. Since instrument design and operating conditions may vary, each laboratory should establish its own expected values and control limits. The mean value established should fall within the Expected Ranges shown on the chart.	Die erwarteten Wertbereiche sollen als Leitfaden bei der Bewertung der Leistung von Analysiergeräten dienen. Da die Instrumentausführung und Betriebsbedingungen variieren können, sollte jedes Labor seine eigenen Wertverteilungen und Kontrollbeschränkungen erstellen. Der selbst-erstellte Mittelwert sollte dem auf der vorgegebenen Wertbereichstabelle entsprechen.	Les gammes prévues sont fournies comme guide dans l'évaluation de performance d'analyseur. Comme la conception d'instrument et les conditions de fonctionnement peut changer, chaque laboratoire devrait établir ses propres valeurs et limites de commande. La valeur moyenne établie devrait faire partie des marges prévues montrées sur le diagramme.	Los rangos esperados se suministran como una guía en la evaluación del funcionamiento de los analizadores. Las condiciones pueden haber variado desde que los instrumentos fueron diseñados y cada laboratorio deberá de establecer su propio criterio de aceptación de valores.	As variações esperadas são fornecidas como um guia para avaliação de desempenho do analisador. Como o instrumento e as condições de operação podem variar, cada laboratório deve estabelecer seus próprios valores e limites de controle. O valor médio estabelecido deve estar dentro das variações previstas descritas nestas tabelas.	配伍范围仅作参考。由于仪器的设计和操作条件可能会有变化，每个实验室应建立自己的配伍及范围。平均值应在配伍范围范围内。	Ожидаемые Диапазоны в качестве индикатора при оценке характеристик прибора могут меняться, каждая лаборатория должна устанавливать свою собственную ожидаемую величину и контрольные пределы. Значение ожидаемой величины должно попадать в Ожидаемый Диапазон, указанный на диаграмме.

Mission Control™

Blood Gas and Electrolyte Control - Level 2

REF DD-92002D		CE	IVD	2028/07	LOT	2508146	
English Intended Use: MISSION CONTROL™ Blood Gas and Electrolyte Control is an assayed quality control material intended for monitoring the measurements of pH, pCO ₂ , pO ₂ , in blood gas analyzers and sodium, potassium, chloride, lithium, ionized calcium and total carbon dioxide in ISE electrolyte analyzers.		DEUTSCH Vorgesehener Gebrauch: MISSION CONTROL™ Blutgas- und Elektrolyt-Kontrolle ist eine Qualitätskontrollprüfung, die zur Überwachung der Messungen des pH-Wertes, pCO ₂ , pO ₂ , in Blutgasanalysatoren und Natrium, Kalium, Chlorid, Lithium, ionisiertes Calcium und Total-Kohlendioxid in ISE-Elektrolyt-Analysatoren dient.		FRANÇAIS Utilisation prévue : MISSION CONTROL™ Contrôle de gaz et d'électrolyte de sang est un matériel pour analyser le contrôle de qualité destiné à surveiller les mesures de pH, pCO ₂ , pO ₂ en analyseurs et sodium de gaz de sang, potassium, chlorure, lithium, calcium ionisé et anhydride carbonique total dans des analyseurs d'électrolyte d'ISE.		ESPAÑOL Uso: MISSION CONTROL™ para Gases Arteriales y Electrolitos es un material aprobado para el control de calidad en el monitor de mediciones de pH, pCO ₂ , PO ₂ en analizadores de gases arteriales y de sodio, potasio, cloro, litio, calcio ionizado y dióxido de carbono total en analizadores de electrolitos.	
Português Uso pretendido: MISSION CONTROL™ Controle de gases sanguíneos e eletrólitos é um material ensaiado, que estabelece parâmetros para controle de qualidade de análises, usado para monitorar as medições de pH, pCO ₂ e pO ₂ , em analisadores de gases sanguíneos, e sódio, potássio, cloreto, lítio, cálcio ionizado e dióxido de carbono total, em analisadores de eletrólitos ISE.		Chinese 用途: MISSION CONTROL™ 血气和电解质控制用于监测血气分析仪测量的 pH、pCO ₂ 、pO ₂ 以及电解质分析测量的钠、钾、氯、锂、离子钙和总二氧化碳结合力分析物质。		Русский Способ применения: MISSION CONTROL™ Анализ газов крови и электролитов - это проверенный контроль качества материалов, применяемый для мониторинга измерения pH, pCO ₂ , pO ₂ в аппарате для анализа газа крови, а также натрия, калия, хлорида, лития, ионизированного кальция и всего углекислого газа в электролитных анализаторах ISE.			
Product Description: This control material is provided for monitoring analyzer performance. It is packaged in sealed glass ampules, each containing approximately 1.8 ml of solution. Ampules are packaged 10 per tray with each box containing 3 trays, for a total of 30 ampules per box.		Produktbeschreibung: Dieses Kontrollmaterial ist für die Überwachung der Analyserleistung. Es ist in verschlossenen Glasampullen verpackt mit jeweils etwa 1.8 ml Lösung. Ein Karton beinhaltet 3 Fächer mit jeweils 10 Ampullen. Es sind insgesamt 30 Ampullen pro Karton.		Descripción del Producto: Este material de control es suministrado para monitorear el funcionamiento del analizador. El paquete sellado contiene ampollas de vidrio, cada una con aproximadamente 1.8 ml de solución. Las ampollas están empaquetadas de a 10 unidades por bandeja y cada caja contiene 3 bandejas, para un total de 30		Descrição de produto: Este controle é fornecido para monitoramento de desempenho de analisadores. É envasado em ampolas de vidro seladas, cada uma contendo aproximadamente 1.8 ml de solução. As ampolas são dispostas em bandejas com 10 cada, embaladas em caixas com 3 bandejas, totalizando 30 ampolas por caixa.	
Active Ingredients: MISSION CONTROL™ is a buffered solution of electrolytes (Na ⁺ , K ⁺ , Cl ⁻ , Ca ⁺⁺ , Li ⁺ , HCO ₃ /CO ₃), it has been equilibrated with specific levels of CO ₂ , O ₂ , and N ₂ . This control contains no human-based materials.		Aktive Inhaltsstoffe: MISSION CONTROL™ ist eine gepufferte Lösung von Elektrolyten (Na ⁺ , K ⁺ , Cl ⁻ , Ca ⁺⁺ , Li ⁺ , HCO ₃ /CO ₃). Diese wurde mit bestimmten Ebenen von CO ₂ , O ₂ und N ₂ equilibriert. Diese Kontrolle enthält keine menschlichen Grundmaterialien.		Ingredientes Activos: MISSION CONTROL™ es una solución buffer de electrolitos (Na ⁺ , K ⁺ , Cl ⁻ , Ca ⁺⁺ , Li ⁺ , HCO ₃ /CO ₃ -2). Esta ha sido calibrada con niveles específicos de CO ₂ , O ₂ y N ₂ . Esta solución de control no contiene ingredientes de base humana.		活性成份: MISSION CONTROL™ 是电解质离子 (Na ⁺ , K ⁺ , Cl ⁻ , Ca ⁺⁺ , Li ⁺ , HCO ₃ /CO ₃ -2), 经平衡的 CO ₂ , O ₂ 和 N ₂ 平衡而成的。本控制不含有人血物质成份。	
Directions for Use Immediately introduce the liquid from the ampule to the analyzer, following the instrument manufacturer's instructions for sampling a control material. Use direct aspiration, syringe transfer, or capillary mode techniques.		Gebrauchsanweisung: Nach dem Öffnen, führen Sie sofort die Flüssigkeit aus der Ampulle in den Analytiker ein und folgen Sie den Hersteller-Anweisungen für die Probenahme des Kontrollmaterials. Verfahren Sie mit Direktinführung, Spritzentransfer oder Kapillar-Modus-Techniken.		Instrucción para su uso: Introduzca el líquido directamente al analizador, a través de la ampolla, siguiendo las instrucciones del fabricante para el muestreo de material de control. Utilice con aspiración directa, transferencia por jeringa o técnicas capilares.		Instruções para uso: Introduza o líquido da ampola no analisador, imediatamente após abrir a ampola, seguindo as instruções do fabricante do equipamento, para amostra de material de controle. Use aspiração direta, transferência por seringa ou técnica capilar.	
Limitation: 1. This control is sensitive to many instrument related factors that affect analytical results. Because it is not a blood-based material, it may not detect certain malfunctions, which would affect the testing of blood. 2. This product is intended for use as a quality control material and can assist in evaluating the performance of laboratory instruments. It is not for use as a calibration standard and its use should not replace other aspects of a complete quality control program.		Begrenzung: 1. Diese Kontrolle ist auf viele instrument-bezogenen Faktoren empfindlich, die das analytische Ergebnis verfälschen kann. Da es kein echtes Blutmaterial ist, kann es daher keine Störungen, die sich in der Untersuchung von richtigem Blut zeigen, erkennen. 2. Dieses Produkt dient als Qualitätskontrolle und soll als Bewerter fuer die Leistung von Laborgeräten eingesetzt werden. Es ist kein Kalibrierstandard und dessen Verwendung sollte nicht an Stelle von anderen kompletten Qualitätskontroll-Programmen Ersatz leisten.		Limitações: 1. Este controle é sensível a muitos factores relativos al instrumento que pueden afectar los resultados analíticos. Debido a que este material no tiene base sanguínea, no podrá detectar algunas anomalías que podrían afectar los resultados de pruebas de sangre. 2. La intención de este producto es que sea usado como material de control de calidad y pueda asistir en la evaluación del funcionamiento de instrumentos de laboratorio. Esta solución no es para ser usada como un estándar de calibración y no puede ser reemplazado en otros aspectos del programa de control de calidad.		Limitações: 1. Este produto é sensível a vários factores relacionados aos equipamentos, que afetam resultados analíticos. Como não é um material de origem de sangue humano, não é capaz de detectar certas disfunções, que o afetaria o teste de sangue. 2. Este produto é para uso como controle de qualidade e pode auxiliar na avaliação do desempenho de instrumentos de laboratório. Não deve ser usado como padrão de calibração e seu uso não deve substituir outros programas completos de controle de qualidade.	
Storage: Store at 18-25°C. Avoid freezing and exposure to temperatures greater than 30°C. You may also store at 4-25°C without adverse effect.		Lagerung: Bei 18-25°C aufbewahren. Vermeiden Sie Einfrierung und Aussetzung bei Temperaturen von mehr als 30°C. Die Lagerung bei 4-25°C ist ohne negative Auswirkung.		Almacenamiento: Almacene entre 18-25°C. Evite su congelamiento y la exposición a altas temperaturas, mayores a 30°C. Usted puede tambien almacenarlo entre 4-25°C sin presentar efectos adversos.		Armazenamento: Armazene de 18 - 25°C. Evite congelamento e exposição a temperaturas superiores a 30°C. Também pode ser armazenado de 4 - 25°C, sem efeitos adversos.	
Expected Ranges: The values for each control analyte on the enclosed Expected Ranges Chart are based on multiple determinations performed on randomly selected samples from each lot. The listing for each instrument represents the expected range for these ampules when tested at 23°C. (Note: pO ₂ values will vary inversely by about one percent (1%) per degree C that the temperature of the ampules varies from 23°C).		Wertbereiche: Die Werte für jeden Kontrollanalyt auf der beiliegenden Wertbereichstabelle basieren auf mehreren Ermittlungen, die von zufällig ausgewählten Proben von jeder Partie stammen. Die Liste für jedes Instrument beschreibt das erwartete Resultat für die jeweilige Ampulle bei der Prüfung bei 23°C. (Hinweis: pO ₂ Werte variieren umgekehrt um rund ein Prozent (1%) pro Grad C, die Temperatur der Ampulle variiert um 23 °C).		Rangos Esperados: El inserto con los valores esperados para cada parámetro se ha basado en múltiples determinaciones hechas con muestras seleccionadas aleatoriamente por cada lote. El listado para cada instrumento representa el rango esperado por prueba usando ampollitas a temperatura de 23°C. (Nota: los valores de pO ₂ pueden variar inversamente en un por ciento (1%) por grado C que la temperatura de las ampollitas varía de 23°C).		Valores esperados: Os valores para controle de cada analito, na Tabela de Variação Esperada (Expected Ranges Chart) anexa, foram baseados em múltiplas determinações realizadas, em amostras selecionadas aleatoriamente de cada lote. A lista de cada Instrumento representa o valor esperado para aquela temperatura de 23°C. (Nota: valores de pO ₂ variam inversamente, aproximadamente 1%, por grau C que a ampola varie de 23°C).	
Expected Ranges: The values for each control analyte on the enclosed Expected Ranges Chart are based on multiple determinations performed on randomly selected samples from each lot. The listing for each instrument represents the expected range for these ampules when tested at 23°C. (Note: pO ₂ values will vary inversely by about one percent (1%) per degree C that the temperature of the ampules varies from 23°C).		Expected Ranges: The values for each control analyte on the enclosed Expected Ranges Chart are based on multiple determinations performed on randomly selected samples from each lot. The listing for each instrument represents the expected range for these ampules when tested at 23°C. (Note: pO ₂ values will vary inversely by about one percent (1%) per degree C that the temperature of the ampules varies from 23°C).		Expected Ranges: The values for each control analyte on the enclosed Expected Ranges Chart are based on multiple determinations performed on randomly selected samples from each lot. The listing for each instrument represents the expected range for these ampules when tested at 23°C. (Note: pO ₂ values will vary inversely by about one percent (1%) per degree C that the temperature of the ampules varies from 23°C).		Expected Ranges: The values for each control analyte on the enclosed Expected Ranges Chart are based on multiple determinations performed on randomly selected samples from each lot. The listing for each instrument represents the expected range for these ampules when tested at 23°C. Expected Ranges: The values for each control analyte on the enclosed Expected Ranges Chart are based on multiple determinations performed on randomly selected samples from each lot. The listing for each instrument represents the expected range for these ampules when tested at 23°C. (Note: pO ₂ values will vary inversely by about one percent (1%) per degree C that the temperature of the ampules varies from 23°C).	
Expected Ranges: The values for each control analyte on the enclosed Expected Ranges Chart are based on multiple determinations performed on randomly selected samples from each lot. The listing for each instrument represents the expected range for these ampules when tested at 23°C. (Note: pO ₂ values will vary inversely by about one percent (1%) per degree C that the temperature of the ampules varies from 23°C).		Expected Ranges: The values for each control analyte on the enclosed Expected Ranges Chart are based on multiple determinations performed on randomly selected samples from each lot. The listing for each instrument represents the expected range for these ampules when tested at 23°C. (Note: pO ₂ values will vary inversely by about one percent (1%) per degree C that the temperature of the ampules varies from 23°C).		Expected Ranges: The values for each control analyte on the enclosed Expected Ranges Chart are based on multiple determinations performed on randomly selected samples from each lot. The listing for each instrument represents the expected range for these ampules when tested at 23°C. (Note: pO ₂ values will vary inversely by about one percent (1%) per degree C that the temperature of the ampules varies from 23°C).		Expected Ranges: The values for each control analyte on the enclosed Expected Ranges Chart are based on multiple determinations performed on randomly selected samples from each lot. The listing for each instrument represents the expected range for these ampules when tested at 23°C. (Note: pO ₂ values will vary inversely by about one percent (1%) per degree C that the temperature of the ampules varies from 23°C).	
Expected Ranges: The values for each control analyte on the enclosed Expected Ranges Chart are based on multiple determinations performed on randomly selected samples from each lot. The listing for each instrument represents the expected range for these ampules when tested at 23°C. (Note: pO ₂ values will vary inversely by about one percent (1%) per degree C that the temperature of the ampules varies from 23°C).		Expected Ranges: The values for each control analyte on the enclosed Expected Ranges Chart are based on multiple determinations performed on randomly selected samples from each lot. MISSION CONTROL™ Blood Gas and Electrolyte Control - Level 3																																										
REF DD-92003D		CE		IVD		2028/08		LOT		2509112																																
English Intended Use: MISSION CONTROL™ Blood Gas and Electrolyte Control is an assayed quality control material intended for monitoring the measurements of pH, pCO₂, pO₂ in blood gas analyzers and sodium, potassium, chloride, lithium, ionized calcium and total carbon dioxide in ISE electrolyte analyzers.																																										
Product Description: This control material is provided for monitoring analyzer performance. It is packaged in sealed glass ampoules, each containing approximately 1.8 ml of solution. Ampoules are packaged 10 per tray with each box containing 3 trays, for a total of 30 ampoules per box.																																										
Active Ingredients: MISSION CONTROL™ is a buffered solution of electrolytes (Na⁺, K⁺, Cl⁻, Ca⁺⁺, Li⁺, HCO₃⁻/CO₃⁻). It has been equilibrated with specific levels of CO₂, O₂, and N₂. This control contains no human-based materials.																																										
Directions for Use Immediately introduce the liquid from the ampule to the analyzer, following the instrument manufacturer's instructions for sampling a control material. Use direct aspiration, syringe transfer, or capillary mode techniques.																																										
Limitation: 1. This control is sensitive to many instrument related factors that affect analytical results. Because it is not a blood-based material, it may not detect certain malfunctions, which would affect the testing of blood. 2. This product is intended for use as a quality control material and can assist in evaluating the performance of laboratory instruments. It is not for use as a calibration standard and its use should not replace other aspects of a complete quality control program.																																										
Storage: Store at 18-25°C. Avoid freezing and exposure to temperatures greater than 30°C. You may also store at 4-25°C without adverse effect.																																										
Expected Ranges: The values for each control analyte on the enclosed Expected Ranges Chart are based on multiple determinations performed on randomly selected samples from each lot. The listing for each instrument represents the expected range for these ampoules when tested at 23°C. (Note: pO₂ values will vary inversely by about one percent (1%) per degree C that the temperature of the ampoules varies from 23°C).																																										
The Expected Ranges are provided as a guide in evaluating analyzer performance. Since instrument design and operating conditions may vary, each laboratory should establish its own expected values and control limits. The mean value established should fall within the Expected Ranges shown on the chart.																																										
Deutsch Vorgesehener Gebrauch: MISSION CONTROL™ Blutgas- und Elektrolyt-Kontrolle ist eine Qualitätskontrollprüfung, die zur Überwachung der Messungen des pH-Wertes, pCO₂, pO₂ in Blutgasanalysatoren und Natrium, Kalium, Chlorid, Lithium, ionisiertes Calcium und Total-Kohlendioxid in ISE-Elektrolyt-Analysatoren dient.																																										
Produktbeschreibung: Diese Kontrolle dient für die Überwachung der Analyserleistung. Es ist in verschlossenen Glasampullen verpackt mit jeweils etwa 1.8 ml Lösung. Ein Karton beinhaltet 3 Fächer mit jeweils 10 Ampullen. Es sind insgesamt 30 Ampullen pro Karton.																																										
Aktive Inhaltsstoffe: MISSION CONTROL™ ist eine gepufferte Lösung von Elektrolyten (Na⁺, K⁺, Cl⁻, Ca⁺⁺, Li⁺, HCO₃⁻/CO₃⁻). Diese wurde mit bestimmten Ebenen von CO₂, O₂ und N₂ equilibriert. Diese Kontrolle enthält keine menschlichen Grundmaterialien.																																										
Gebrauchsanweisung: Nach dem Öffnen, fügen Sie sofort die Flüssigkeit aus der Ampulle in den Analyser ein und folgen Sie den Hersteller-Anweisungen für die Probenahme des Kontrollmaterials. Verfahren Sie mit Direktinspiration, Spritzentransfer oder Kapillar-Modus-Techniken.																																										
Begrenzung: 1. Diese Kontrolle ist auf viele instrument-bezogenen Faktoren empfindlich, die das analytische Ergebnis verfälschen können. Da es kein echtes Blutmaterial ist, kann es daher keine Störungen, die sich in der Untersuchung von richtigem Blut zeigen, erkennen. 2. Dieses Produkt dient als Qualitätskontrolle und soll als Beweiser für die Leistung von Laborgeräten eingesetzt werden. Es ist kein Kalibrierstandard und dessen Verwendung sollte nicht an Stelle von anderen kompletten Qualitätskontroll-Programmen Ersatz stellen.																																										
Lagerung: Bei 18-25 °C aufbewahren. Vermeiden Sie Einfrierung und Aussetzung bei Temperaturen von mehr als 30 °C. Die Lagerung bei 4-25 °C ist ohne negative Auswirkung.																																										
Wertbereiche: Die Werte für jeden Kontrollanalyt auf der beiliegenden Wertebereichstabelle basieren auf mehreren Ermittlungen, die von zufällig ausgewählten Proben von jeder Partie stammen. Die Liste für jedes Instrument beschreibt das erwartete Resultat für diese Ampullen bei der Prüfung bei 23°C. (Hinweis: pO₂ Werte variieren umgekehrt um rund ein Prozent (1%) pro Grad C, die Temperatur der Ampulle variiert um 23°C).																																										
Die erwarteten Wertbereiche sollen als Leitfaden bei der Bewertung der Leistung von Analysegeräten dienen. Da die Instrumentausführung und Betriebsbedingungen variieren können, sollte jedes Labor seine eigenen Wertebereiche und Kontrollschranken erstellen. Der selbst-erstellte Mittelwert sollte dem auf der vorgegebenen Wertebereichstabelle entsprechen.																																										
Français Utilisation prévue : MISSION CONTROL™ Contrôle de gaz et d'électrolytes de sang est un matériel pour analyse de contrôle de qualité destiné à surveiller les mesures de pH, pCO₂, pO₂ en analyseurs et sodium, potassium, chlorure, lithium, calcium ionisé et anhydride carbonique total dans des analyseurs d'électrolyte d'ISE.																																										
Description de produit : Ce matériel de contrôle est destiné pour surveiller l'exécution d'analyseur. Il est emballé dans des ampoules de verre scellées, chaque contenant approximativement 1.8 ml de solution. Les ampoules sont emballées par 10 par plateau avec chaque boîte contenant 3 plates.																																										
Substances actives : MISSION CONTROL™ est une solution tampon des électrolytes (Na⁺, K⁺, Cl⁻, Ca⁺⁺, Li⁺, HCO₃⁻/CO₃⁻). Elle a été équilibrée avec les niveaux spécifiques du CO₂, de l'O₂, et du N₂. Ce contrôle ne contient aucun matériaux humains.																																										
Notices d'emploi Introduire immédiatement le liquide de l'ampoule à l'analyseur, suivez les instructions du fabricant d'instrument pour prélever un matériel de contrôle. Utilisez l'aspiration directe, le transfert de seringue, ou les techniques de mode capillaire.																																										
Limitation : 1. Ce contrôle est sensible à beaucoup de facteurs relatifs au matériel qui affectent des résultats analytiques. Puisque ce n'est pas un matériel sang-basé, il peut ne pas détecter certaines anomalies de fonctionnement, qui affecteraient l'essai du sang. 2. Ce produit est prévu pour l'usage comme matériel de contrôle de qualité et peut aider à évaluer l'exécution des instruments de laboratoire. Il ne sert pas car un calibrage standard et son utilisation ne devraient pas remplacer d'autres aspects d'un programme de contrôle de qualité.																																										
Stockage : Stock à la température 18-25°C. Évitez de geler et exposer aux températures plus hautes que 30°C. Vous pouvez également stocker 4-25°C sans effet adverse.																																										
Gammes prévues : Les valeurs pour chaque analyte de contrôle sur le diagramme de gammes inclus sont basées sur des déterminations multiples effectuées sur les échantillons aléatoirement choisis provenant de chaque lot. La liste pour chaque instrument représente la gamme prévue pour ces ampoules une fois examinée à 23°C. (Note : les valeurs pO₂ changeront inversement par environ un pour cent (1%) par degré C que la température des ampoules change de 23°C).																																										
Les gammes prévues sont fournies comme guide dans l'évaluation de performance d'analyseur. Comme la conception d'instrument et les conditions de fonctionnement peuvent changer, chaque laboratoire devrait établir ses propres valeurs et limites de commande. La valeur moyenne établie devrait faire partie des marges prévues montrées sur le diagramme.																																										
Español Uso: MISSION CONTROL™ para Gases Arteriales y Electroólitos es un material ensaiado, que establece parámetros para control de calidad en el monitoreo de mediciones de pH, pCO₂, pO₂ en analizadores de gases arteriales y de sodio, potasio, cloro, litio, calcio ionizado y dióxido de carbono total en analizadores de electrolitos.																																										
Descripción del Producto: Este material de control es suministrado para monitorear el funcionamiento del analizador. El paquete sellado contiene ampollitas de vidrio, cada una con aproximadamente 1.8 ml de solución. Las ampollitas están empaquetadas de a 10 unidades por bandeja y cada caja contiene 3 bandejas, para un total de 30 ampollitas por caja.																																										
Ingredientes Activos: MISSION CONTROL™ es una solución buffer de electrolitos (Na⁺, K⁺, Cl⁻, Ca⁺⁺, Li⁺, HCO₃⁻/CO₃⁻2). Esta ha sido calibrada con niveles específicos de CO₂, O₂ y N₂. Esta solución de control no contiene ingredientes de base humana.																																										
Instrucción para su uso: Introduzca el líquido directamente al analizador, a través de la ampollita, siguiendo las instrucciones del fabricante para el material de control. Utilícelo con aspiración directa, transferencia por jeringa o técnicas capilares.																																										
Limitaciones: 1. Este control es sensible a muchos factores relativos al instrumento que pueden afectar los resultados analíticos. Debido a que este material no tiene base sanguínea, no podrá detectar algunas anomalías que podrían afectar los resultados de pruebas de sangre. 2. La intención de este producto es que sea usado como material de control de calidad y pueda asistir en la evaluación del funcionamiento de instrumentos de laboratorio. Esta solución no es para ser usada como un estándar de calibración y no puede ser remplazado en otros aspectos del programa de control de calidad.																																										
Almacenamiento: Almacenar entre 18-25°C. Evite su congelamiento y la exposición a altas temperaturas, mayores a 30°C. Usted puede también almacenarlo entre 4-25°C sin presentar efectos adversos.																																										
Rangos Esperados: El inserto con los valores esperados para cada parámetro se ha basado en múltiples determinaciones hechas con muestras seleccionadas aleatoriamente por cada lote. El listado para cada instrumento representa el rango esperado por prueba usando ampollitas a temperatura de 23°C. (Nota: Los valores de pO₂ pueden variar inversamente, aproximadamente 1%, por grado C que la ampola varíe de 23°C).																																										
As variáveis esperadas são fornecidas como um guia para avaliação de desempenho do analisador. Como o instrumento e as condições de operação podem variar, cada laboratório deve estabelecer seus próprios valores e limites de controle. O valor médio estabelecido deve estar dentro das variações previstas descritas nestas tabelas.																																										
Português Uso pretendido: MISSION CONTROL™ Controle de gases sanguíneos e eletrólitos é um material ensaiado, que estabelece parâmetros para controle de qualidade de análises, usado para monitorar as medidas de pH, pCO₂, pO₂ em analisadores de gases sanguíneos, e sódio, potássio, cloro, lítio, cálcio ionizado e dióxido de carbono total, em analisadores de eletrólitos ISE.																																										
Descrição de produto: Este controle é fornecido para monitoramento de desempenho de analisadores. É enviado em ampolas de vidro seladas, cada uma contendo aproximadamente 1.8 ml de solução. As ampolas são dispostas em bandejas com 10 cada, embaladas em caixas com 3 bandejas, totalizando 30 ampolas por caixa.																																										
Ingredientes ativos: MISSION CONTROL™ é uma solução tamponada de eletrólitos (Na⁺, K⁺, Cl⁻, Ca⁺⁺, Li⁺, HCO₃⁻/CO₃⁻2), equilibrada com níveis específicos de CO₂, O₂ e N₂. Este controle não contém material de origem humana.																																										
Instruções para uso: Introduza o líquido da ampola no analisador, imediatamente após abrir a ampola, seguindo as instruções do fabricante do equipamento, para amostra de material de controle. Utilize aspiração direta, transferência por seringa ou técnica capilar.																																										
Limitações: 1. Este controle é sensível a vários fatores relacionados aos equipamentos, que afetam resultados analíticos. Como não é um material de origem de sangue humano, não é capaz de detectar certas disfunções, o que afetaria o teste de sangue. 2. Este produto é para uso como controle de qualidade e pode auxiliar na avaliação do desempenho de instrumentos de laboratório. Não deve ser usado como padrão de calibração e seu uso não deve substituir outros programas completos de controle de qualidade.																																										
Armazenamento: Armazene entre 18-25°C. Evite congelamento e exposição a temperaturas superiores a 30°C. Também pode ser armazenado de 4-25°C, sem efeitos adversos.																																										
Valores esperados: Os valores para controle de cada analito, na Tabela de Variação Esperada (Expected Ranges Chart) anexa, foram baseados em múltiplas determinações realizadas, em amostras selecionadas aleatoriamente de cada lote. A lista de cada instrumento representa o valor esperado para aquela ampola, testada a 23°C. (Nota: valores de pO₂ variam inversamente, aproximadamente 1%, por grau C que a ampola varie de 23°C).																																										
As variações esperadas são fornecidas como um guia para avaliação de desempenho do analisador. Como o instrumento e as condições de operação podem variar, cada laboratório deve estabelecer seus próprios valores e limites de controle. O valor médio estabelecido deve estar dentro das variações previstas descritas nestas tabelas.																																										
Chinese 用途 MISSION CONTROL™ 血气和电解质质控用于监测血气分析仪器测定的pH、pCO₂、pO₂及电解质分析仪器测量的钠、钾、氯、锂离子和总二氧化碳结合力分析物质。																																										
产品介绍 本试剂物质用于监测仪器的性能表现，它是密封在玻璃安瓿瓶里，每瓶约含有1.8毫升的溶液。每板由10个安瓿瓶，每盒3板共30个安瓿瓶。																																										
活性成份 MISSION CONTROL™ 是电缓冲离子 (Na⁺, K⁺, Cl⁻, Ca⁺⁺, Li⁺, HCO₃⁻/CO₃⁻) 缓冲液，并由特殊水平的CO₂, O₂和N₂平衡而成的。本试剂不含有人血清成份。																																										
使用方法 打开盖后立即应用于分析仪，按照仪器生产商要求直接吸取，可以用注射器加样吸取，或使用注射器转移，应用毛细管方法。																																										
局限性 本试剂对影响分析结果很多仪器相关因素敏感，并不能作为血液品使用，也不能取代一个基于血液程序的其它方案。																																										
本产品作为质控物质能帮助您评价实验室仪器的性能表现，并不能作为校准品使用，也不能取代一个基于质控程序的其它方案。																																										
贮存 18-25摄氏度保存，避免冷冻或放置于30度以上的温度中，放置于4-25摄氏度中也不会有不良影响。																																										
期望范围 附在表中每个质控物质的期望范围表是在任何一个批号安瓿瓶多次测量的结果，列出的每个仪器期望值表代表这些安瓿瓶在23摄氏度测量的结果（注：pO₂值会在温度每升高23摄氏度1度时，结果以相反的方向偏离1%）。																																										
期望范围仅提供作为评价仪器性能表现的参考指导，由于仪器的设计和操作条件可能会有变化，每个实验室应建立自己的期望及范围，平均值应在期望范围内。																																										
Русский Способ применения: MISSION CONTROL™ Анализ газов крови и электролитов - это проверенный контроль качества материалов, применяемый для мониторинга измерений pH, pCO₂, pO₂ в аппаратах для анализа газа крови, а также натрия, калия, хлорида, лития, ионизированного кальция и всего углекислого газа в электролитных анализаторах ISE.																																										
Описание продукта: Этот контрольный материал применяется для мониторинга анализируемых характеристик. Он упаковывается в запечатанные стеклянные ампулы, каждая из которых содержит приблизительно 1.8 мл раствора. Ампулы упаковываются по 10 штук на лотке и по 3 лотка в коробе, значит всего по 30 штук в коробе.																																										
Активные ингредиенты: MISSION CONTROL™ это буферизованный раствор электролитов (Na⁺, K⁺, Cl⁻, Ca⁺⁺, Li⁺, HCO₃⁻/CO₃⁻2). Он сбалансирован на специальном уровне CO₂, O₂ и N₂. Этот анализ не содержит материалов на базе человеческого организма.																																										
Использование: Сразу передайте жидкость из ампулы на анализатор, соблюдая инструкции производителя прибора для образцов контрольного материала. Используйте прямую аспирацию, шприц или капиллярный метод.																																										
Ограничение: 1. Этот анализ чувствителен ко многим факторам, связанным с приборами, влияющими на аналитические результаты. Поскольку этот материал не на основе крови, невозможно обнаружение точных дисфункций, которые влияют на анализ крови. 2. Этот продукт используется как контрольный материал на качество и может помочь в оценке характеристик лабораторных приборов. Он не используется для калибровки аппаратов и не может заменить другой подход к выполнению контроля качества.																																										
Хранение: Хранить при 18-25°C. Избегать замораживания и помещения температуры свыше 30°C. Может быть храним при температуре 4-25°C без появления неблагоприятного эффекта.																																										
Ожидаемые диапазоны: Величины для каждого контрольного анализа вложены в Диаграмму Ожидаемых Диапазонов, основанную на множестве определенных характеристик случайно выбранных образцов из каждой серии. Запись для каждого прибора представляет ожидаемый диапазон для ампул, тестируемых при 23 °C. (Примечание: значения pO₂ будут отличаться инверсно около одного процента (1%) на каждый градус C при изменении температуры ампулы от 23 °C).																																										
Ожидаемые Диапазоны в качестве индикатора при оценке характеристик анализатора. Поскольку конструкция приборов могут меняться, каждая лаборатория должна устанавливать свою собственную ожидаемую величину и контрольные пределы. Значение ожидаемой величины должно попадать в Ожидаемый Диапазон, указанный на диаграмме.
